

# AI App Builder Starter Checklist: 10 Beginner App Prompts

Pick one tiny idea, build the smallest useful version, and test before improving. These prompts are designed for Codex, Replit, Vercel, WordPress Custom HTML, or any beginner-friendly AI app builder.

## 1. Habit tracker

Build a tiny habit tracker with one screen, three default habits, daily checkboxes, and a weekly progress summary. Avoid login.

## 2. Quote tool

Create a quote calculator for a local service business. Ask service type, project size, urgency, and email, then show a price range.

## 3. Quiz app

Build a 5-question beginner quiz. Show one question at a time, track score, and recommend what to study next.

## 4. Checklist page

Create a downloadable checklist page with a headline, short intro, 10 checklist items, and a simple capture form.

## 5. Directory MVP

Build a 12-listing directory with category filters, a search box, and a listing detail view. Use local sample data.

## 6. Intake form

Create a client intake form for name, email, goal, budget, deadline, and notes. Show a confirmation summary.

## 7. Prompt library

Build a prompt library with categories, cards, copy buttons, and search. Include 20 starter prompts.

## 8. Event signup

Create an event signup page with schedule, speaker cards, FAQ, and RSVP form. Keep the first screen action focused.

## 9. Expense splitter

Build an expense splitter where users add people and shared expenses, then see who owes whom. Include reset.

## 10. Project tracker

Create a portfolio tracker with project name, status, next action, and launch date. Add filters by status.

## Before You Build

- Choose one user and one workflow.
- Use sample data before adding accounts.
- Ask for one screen before a full app.
- Name the tools, limits, and test cases.

## Before You Publish

- Test every input, button, and empty state.
- Check mobile layout and long text.
- Remove placeholder copy and fake links.
- Ask one real person to try it.
